

eHR Preparation – Technical Aspect

SSM(AI) eHR PMO

System Overview

eHR Sharing System

Serves as a **platform for sharing** the electronic Health Records of participants **securely** among healthcare providers

Technical Preparation

- Access to eHRSS
- Data interfaces to and from eHRSS

ACCESS TO EHRSS

Controlled Access to eHRSS

- Aim : Protect security and privacy of eHR data
- Can only connect to the eHRSS through 'Identifiable Sources':
 - Fixed IP address; or
 - Installed eHR Encapsulated Linkage Security Application (ELSA)
- To be able to view the eHR clinical data
 - HCP must have joined eHR
 - Patient must have joined eHR
 - Patient has given consent to the HCP
- User Access controlled by Role-based access control

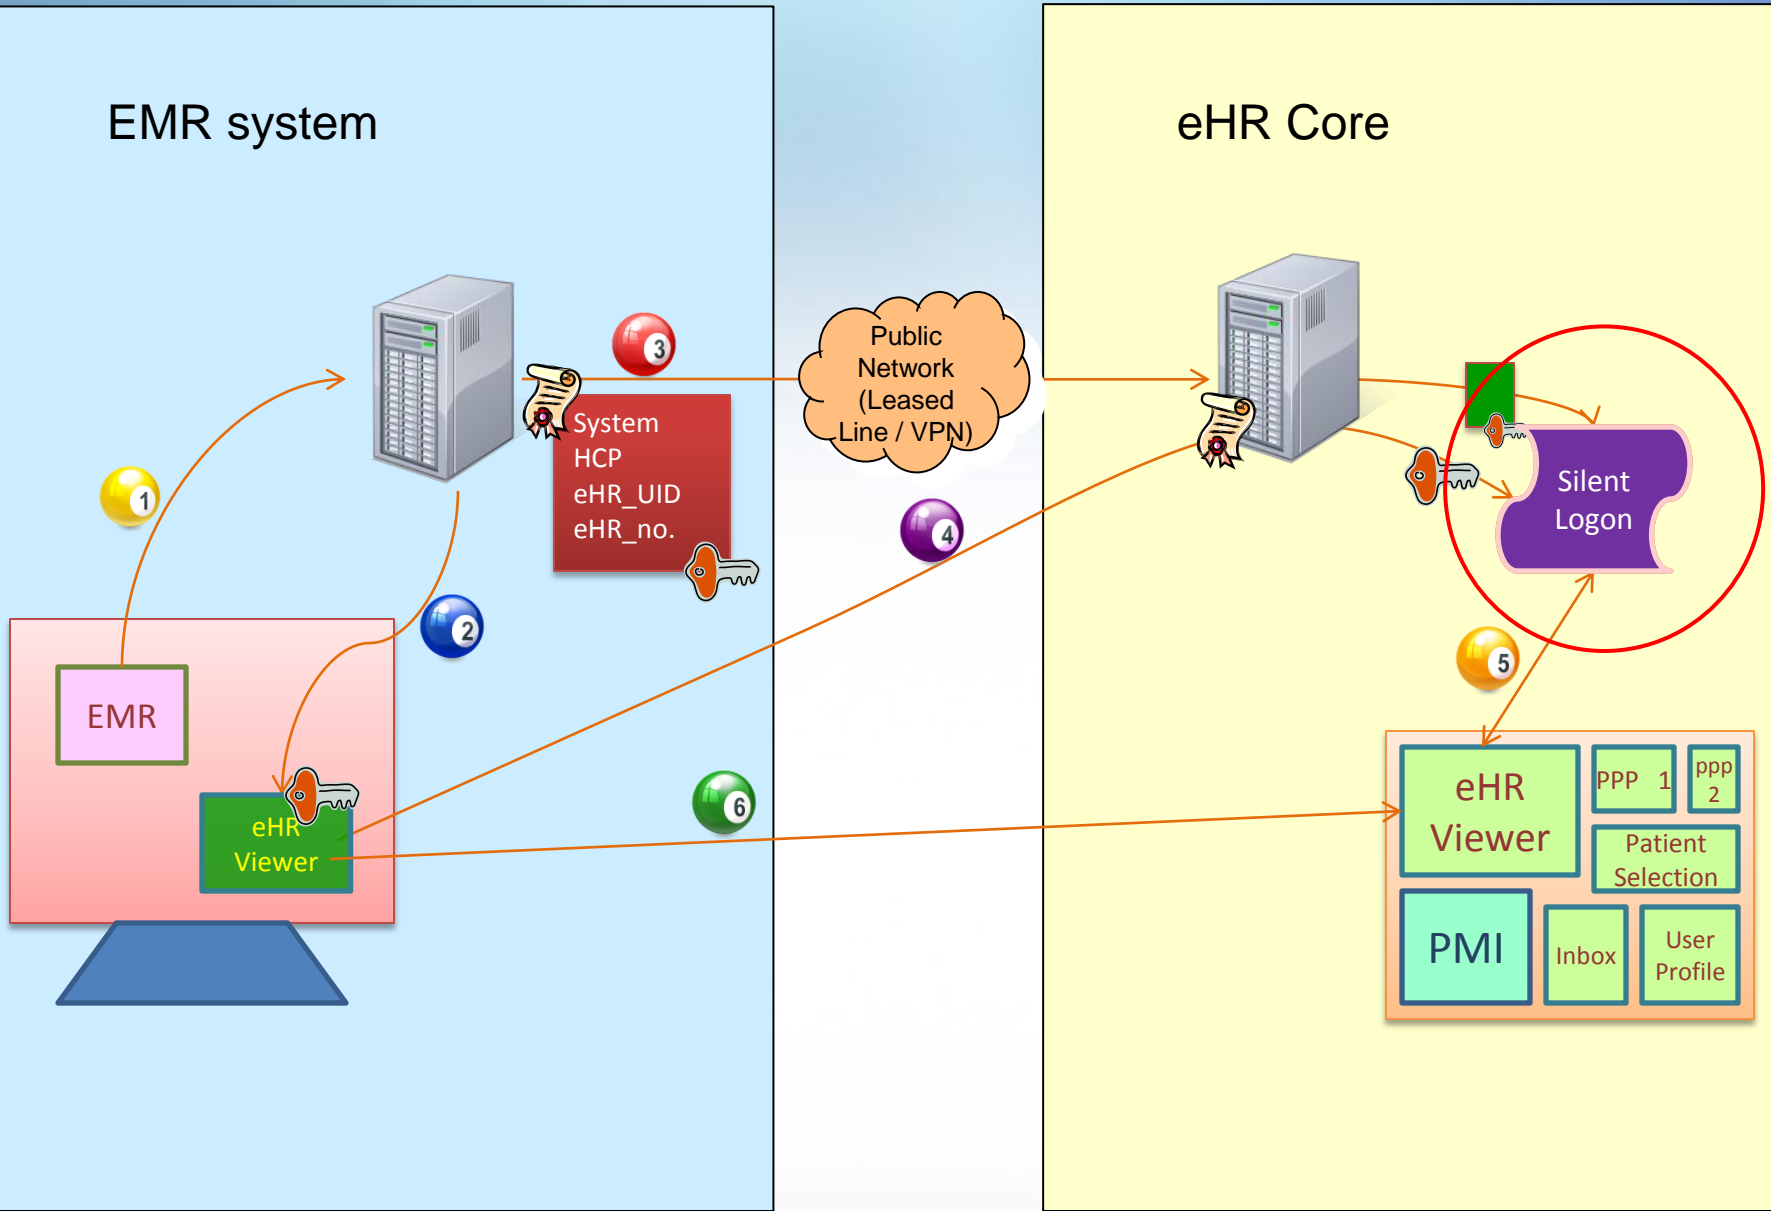

Identifiable sources :
Connection Modes

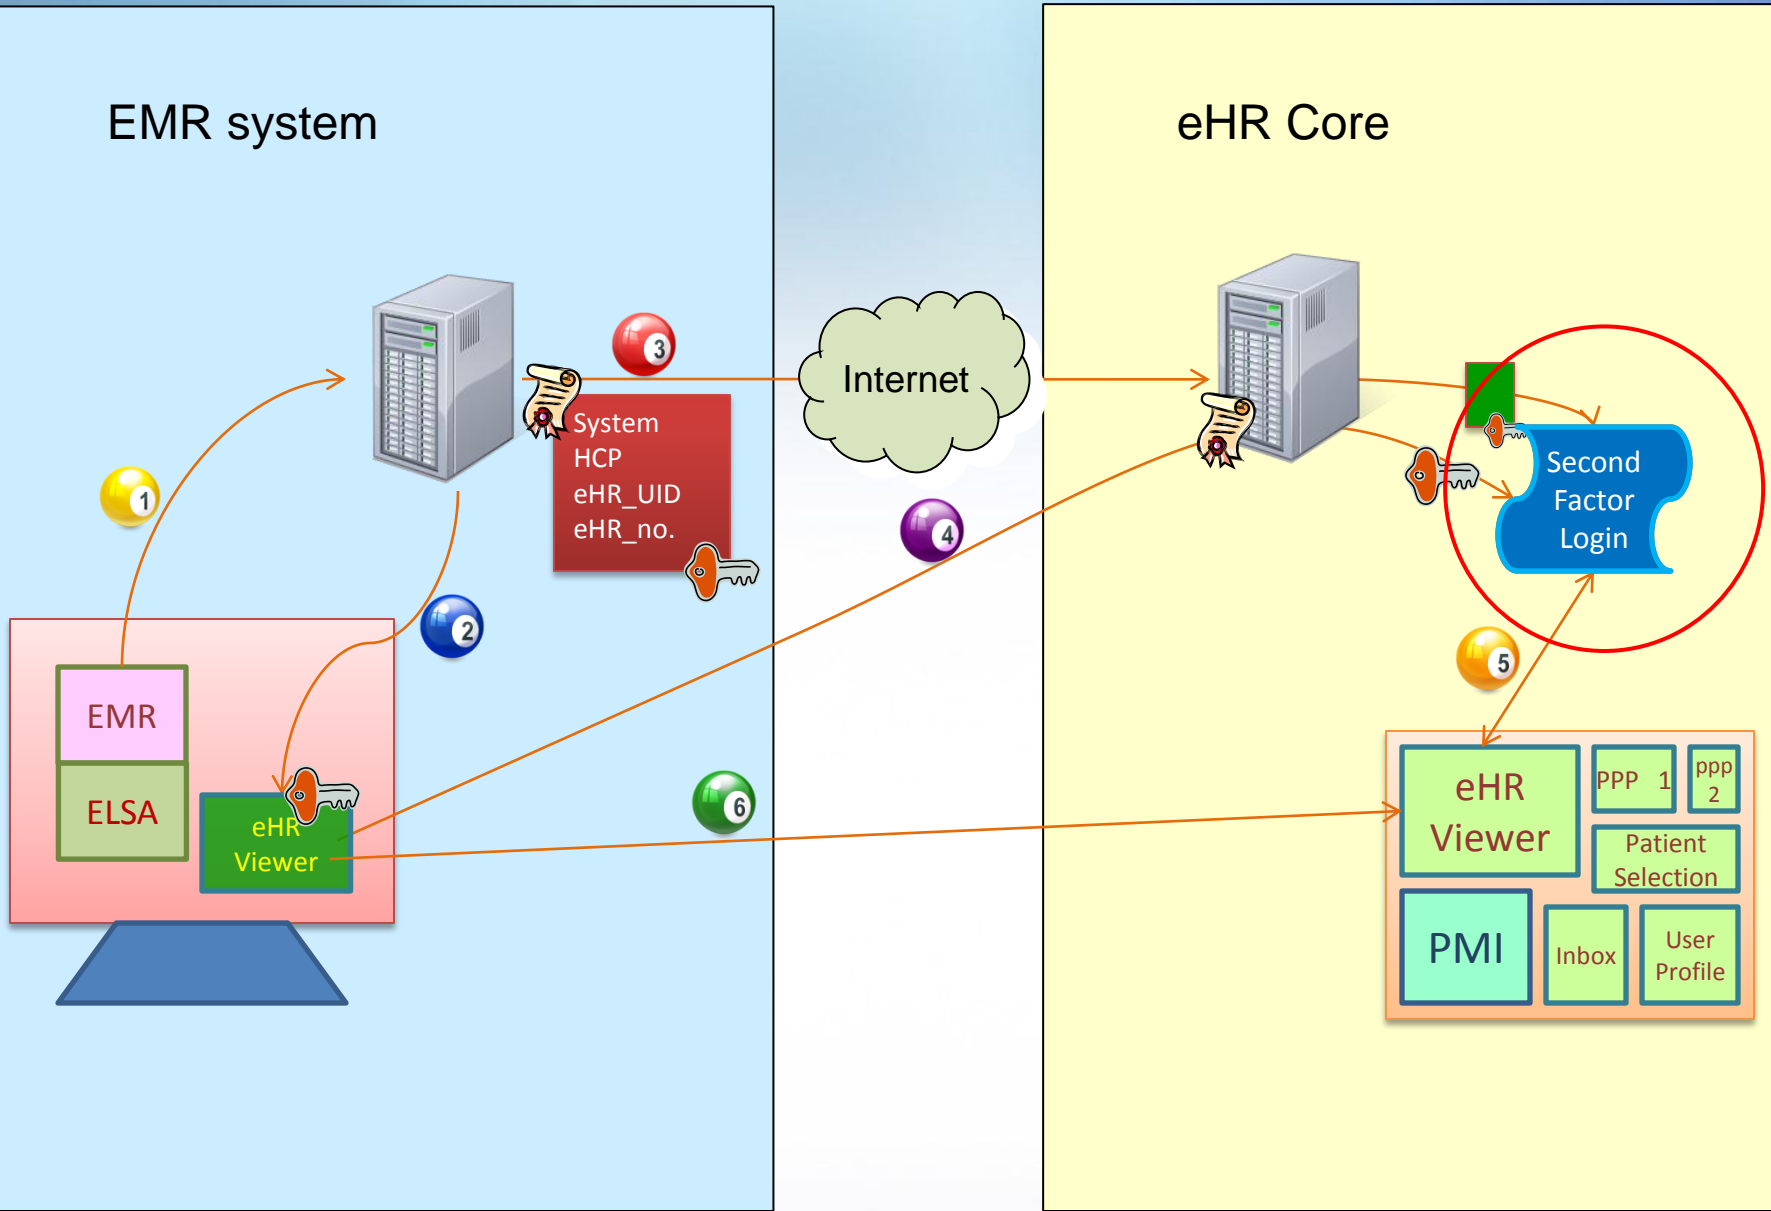

eHR Connection Modes

Mode	Certified EMR	Connect via	Sub Mode	Source Identification	User Authentication			Type of 2nd Factor	User Experience
					Login ID	Password	2nd Factor		
A System based Private Channel Connection	Yes	Leased line/VPN	1.0	Fixed IP	Local	Local	eHR	E-Cert (Server based encryption)	Silent Logon
B System based Public Channel Connection	Yes	Internet	2.0	ELSA	Local	Local	eHR	User elect	2 nd Factor Logon
			3.0	Fixed IP					
C Workstation based Public Channel Connection	No		4.0	ELSA	eHR	eHR	eHR	User elect	Full 2FA Logon
			5.0	Fixed IP					

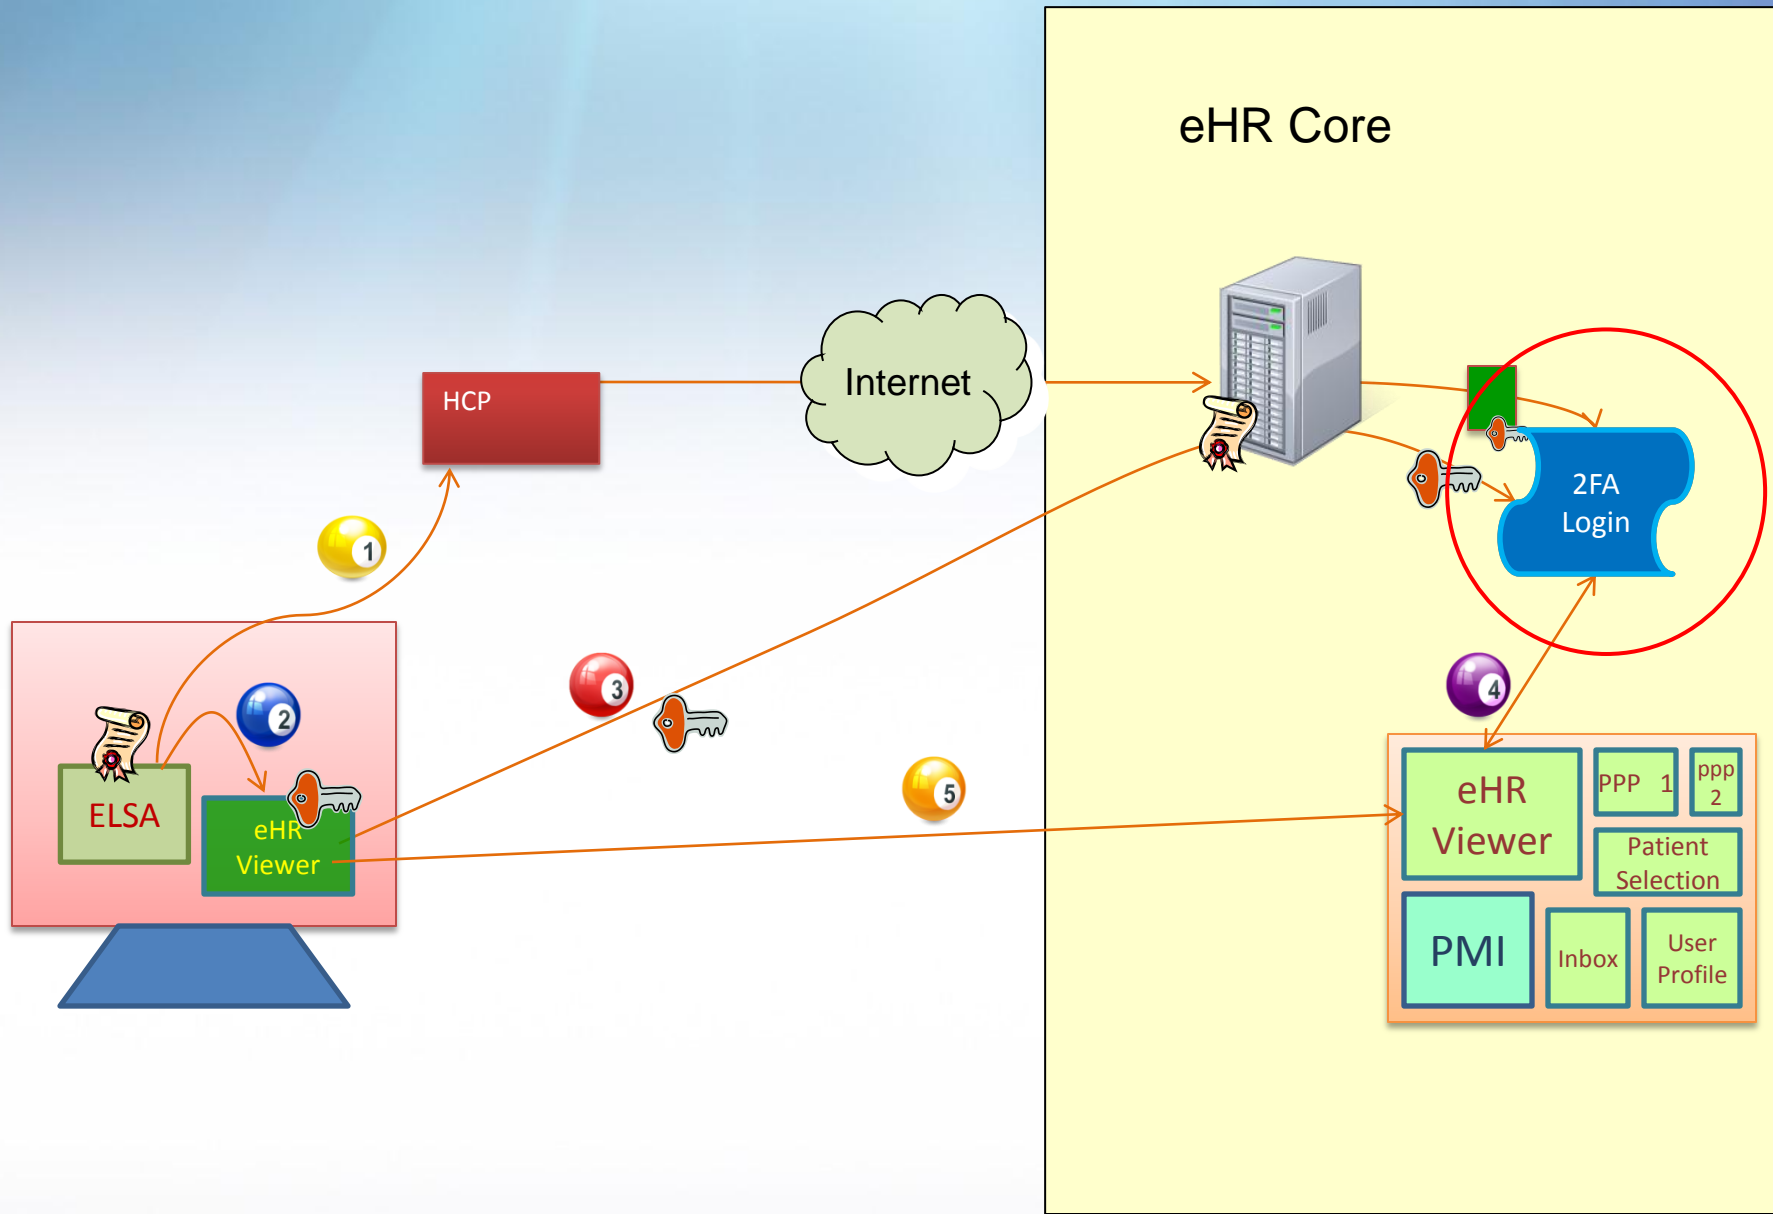

Mode A: Connect to eHR Core via EMR

Mode B: Connect to eHR Core via EMR

Mode C : Workstation Based Connection

Security Assessment Requirement for Different Connection Modes

Mode B	
	8 topics, 33 control questions 17 topics, 59 controls questions for larger Healthcare Providers
	1. Physical Security (3) 2. Wireless Security (1) 3. Malware Protection (4) 4. Authentication and Access Control to Workstations of EMR Systems (12) 5. Authentication and Access Control to eHR Sharing System (4) 6. Software and Patch Update (3) 7. Protection of Patient Data in Removable Media and Mobile Devices (3) 8. Monitoring, Audit and Logging (3)
Mode B	Only applicable to Healthcare Providers which have more than 10 eHR users or more than 2000 eHR participant relationship
6 top	8. Monitoring, Audit and Logging (1) 9. Information Security Governance (3) 10. Information Security Polices (4) 11. Network Security (7) 12. Remote Access (3) 13. Software Acquisition, Development and Maintenance (3) 14. Third Party Security Management (1) 15. Change Controls (2) 16. Training and Awareness (1) 17. Incident Response (1)

Mode A	
	17 topics, 68 control questions
	1. Physical Security (3) 2. Wireless Security (1) 3. Malware Protection (4) 4. Authentication and Access Control to Workstations of EMR Systems (18) 5. Authentication and Access Control to eHR Sharing System (5) 6. Software and Patch Update (3) 7. Protection of Patient Data in Removable Media and Mobile Devices (3) 8. Monitoring, Audit and Logging (5) 9. Information Security Governance (4) 10. Information Security Polices (4) 11. Network Security (7) 12. Remote Access (3) 13. Software Acquisition, Development and Maintenance (3) 14. Third Party Security Management (1) 15. Change Controls (2) 16. Training and Awareness (1) 17. Incident Response (1)

Self Assessment

Regular SRA

Self Assessment

Technical Preparation

- Security Assessment
 - Self assessment checklist on security
 - Mode A requires Security Risk Assessment on systems with direct connection to eHRSS
- Connectivity
 - Network infrastructure requirements depend on Connection Mode(s) elected by HCP
 - EMR System enhancement to integrate with eHRSS
 - Integration test and registration with eHRSS

Patient's consent to HCP : **Relationship Based Access**

Patient Consent

- Govern which HCP can view patient's eHR / upload patient data to eHR
- Use eHRSS <Build Relationship> function to record patient's consent to HCP
- Means of consent
 - HK SmartID Card
 - Written form
 - One-time password
- Technical Preparation
 - Install SmartID Card Reader
 - PMI related enhancements

User Access Control :

Role Based Access Control

Role-based Access Control

- Only authorised users can access eHR under ‘patient-under-care’ & ‘need-to-know’ principles
- A user can access a patient’s record only if :
 - The user can be individually identified & authenticated
 - The user is accessing eHRSS through ‘connection’ of the HCP which his /her account belongs to
 - The patient has a current and valid relationship with the HCP
- Role based access
 - Functions / Data accessible by user depend on the role assigned to the user by HCP
 - Only registered Healthcare professionals (with registration *with Boards & Councils*) can view clinical data
 - Healthcare administrative/ancillary staff has administrative function access only

Related Preparation

- Identify which healthcare staff can access eHR
- Determine what role(s) to be assigned to the staff
- Collect personal data and agreements from staff to create eHR user accounts in eHRSS
 - HKIDs & Names
 - B&C Registration numbers for healthcare professionals requiring access to patient's clinical data
- Create staff accounts in eHR Sharing System
 - Via online <User Account Management> function, or
 - Via batch data interface
 - Assign security token if required
- Ongoing maintenance, e.g. termination of service

Technical Preparation

- For Connection Modes A & B:
 - Enhance local EMR systems to store eHRUIDs generated by eHRSS for use in system interfaces
- If user accounts are to be set up / maintain via batch interface :
 - Develop batch interface program
 - Integration test with eHRSS
 - System handling of eHRUIDs returned by eHRSS
 - Exception handling and on-going maintenance

DATA INTERFACE

Sharing Data to eHR

- HCPs to provide readily sharable electronic data within scope to eHR under patient's consent
- eHR data standard
 - Importance of accurate patient registration (PMI) data
 - Multi standards compliance level for sharable data
 - Level 1 : free-text / PDF document
 - Level 2 : structured data with local value
 - Level 3 : structured data with standard value
 - Computer generated data only (including PDF), no scanning of manual records

Phased Approach

eHR Section	Level 1	Level 2	Level 3
eHR Participant			
Encounter			
Referral			
Clinical note / summary			
Adverse reaction / allergy			
Clinical alert			
Problem			
Procedure			
Birth record			
Assessment / physical exam			
Social history			
Past medical history			
Family history			
Drug – prescription record			
Drug – dispensary record			
Immunization			
Clinical request			
Diagnostic test result – Laboratory			
Diagnostic test result – Radiology			
Diagnostic test result – Other investigation			
Care & treatment plan			

Key : Phase 1 Phase 2 Phase 3 Phase 4 Phase 5

Phase 1 eHR

eHR Section	Level 1	Level 2	Level 3
eHR Participant			
Encounter			
Referral			
Clinical note / summary			
Adverse reaction / allergy			
Clinical alert			
Problem			
Procedure			
Birth record			
Assessment / physical exam			
Social history			
Past medical history			
Family history			
Drug – prescription record			
Drug – dispensary record			
Immunization			
Clinical request			
Diagnostic test result – Laboratory			
Diagnostic test result – Radiology			
Diagnostic test result – Other investigation			
Care & treatment plan			

Key :

Phase 1	Phase 2	Phase 3	Phase 4	Phase 5
---------	---------	---------	---------	---------

Technical Preparation

- Data Upload to eHRSS
 - Determine data domain to be shared & compliance level for each domain
 - If code mapping is used, establish sustainable mechanism (people, system, workflow) to maintain the mapping
 - Determine the interface mechanism:
 - Online message or batch interface
 - Interface Frequency
 - Communication channel and Network set up
 - Develop interface programs and test with eHRSS
 - Register domain & compliance level with eHRSS
 - Mechanism and workflow for on-going exception handling and reconciliation

Technical Preparation

- Data Download from eHRSS
 - PMI and Allergy data only
 - Via Batch interface or online web services, interface channel
- PMI data download
 - Need to ensure accurate identification of individual patient
 - Interface with eHRSS to communicate PMI data (HKID, name ...)
 - Enhance EMR system to store eHR no. for communication and data interfaces with eHRSS
 - Enhance EMR system to store relationship, including date, information to ensure correct data upload
 - Establish processes (system and manual) for exception handling
- Allergy data download
 - Enhance EMR system to interface with eHRSS
 - Enhance EMR system to facilitate integration of downloaded allergy data with local EMR data

Summary

- Connection Modes
 - Determine type of connection modes
 - Complete Security assessment checklist
 - Complete SRA if applicable
 - Develop EMR system integration for modes A & B
- User Account Management
 - Collect users data and determine related roles
 - Develop batch interface for user accounts if necessary
 - System enhancement to store & use eHRUID

Summary

- Data Interfaces
 - Determine domain, compliance level & interface method
 - Develop interface programs
 - Establish network infrastructure for data interface
- PMI data
 - Determine interface method
 - Enhance system to process / submit PMI data downloaded from eHRSS
 - Enhance system to store eHR no. & relationship information

Thank You
