ABSTRACT

Electronic reporting of genetic testing results is increasing, but they are often represented in diverse formats and naming conventions. Logical Observation Identifiers Names and Codes (LOINC) is a vocabulary standard that provides universal identifiers for laboratory tests and clinical observations. In genetics, LOINC provides codes to improve interoperability in the midst of reporting style transition, including codes for cytogenetic or mutation analysis tests, specific chromosomal alteration or mutation testing, and fully structured discrete genetic test reporting. LOINC terms follow the recommendations and nomenclature of other standards such as the Human Genome Organization Gene Nomenclature Committee's terminology for gene names. In addition to the narrative text they report now, we recommend that laboratories always report as discrete variables chromosome analysis results, genetic variation(s) found, and genetic variation(s) tested for. By adopting and implementing data standards like LOINC, information systems can help care providers and researchers unlock the potential of genetic information for delivering more personalized care.

Key words: Genetics, LOINC, Medical records systems, Clinical laboratory information systems, Vocabulary, controlled

INTRODUCTION

Strong arguments exist for delivering molecular genetic test results to electronic health records (EHRs) as standards-based, structured (computable) electronic reports for clinical and research purposes.^{1–4} The fact that most genetic tests apply for a lifetime and may have to be automatically reinterpreted as new knowledge becomes available³ only strengthens these ar-

answer lists, panels of individual observations, other details like help text, and units of measure.¹⁵ New versions of the standard are published twice yearly. LOINC has been widely adopted as the standard for laboratory test result names in the United States, where it is a national standard,^{16,17} and internationally.^{18,19} Many genetic test reporting initiatives,^{20,21} including the HL7 Clinical Genomics Working Group,^{22,23} have

Codes for many other kinds of clinical content in LOINC

- ❑ Radiology studies – 5,165 LOINC terms
 - ❑ Partnership with Radiologic Society of North America and RadLex
- ❑ Ophthalmology/Optometry measurements and studies now > 700 terms , 250 more coming through partnership with US National Eye Institute
- ❑ Cardiac Echo terms – partnership with American and Japanese Society of Echocardiography-
Partial release in December

Other content more

- ❑ Device outputs
 - ❑ MOU with IEEE
 - ❑ More than 600 Variables for anesthesia and ventilator machines, settings and measures out in December mapped to IEEE codes
 - ❑ Agreement covers home devices and more – expect in June release
- ❑ Survey instruments/ questionnaires – more than 6000 individual items over 700 different survey panels, including PROMIS, PHQ, lots of US government forms for home health care, nursing homes, dialysis.

Survey instruments

- ❑ Can find them all in Relma under FILE - > Review Panels, Forms and Surveys

Lab	Clinical Assessments, Scales, Measures	Clinical Documents and Summaries	Diagnostic Studies (non-lab)	Government	Miscellaneous	Survey Instruments (Patient Reported)

LOINC Codes Over Time by Release

LOINC information per term

One Record Per Term

Long Common Name	Cholesterol in LDL [Mass/volume] in Serum or Plasma by Direct assay
Short Name	LDLc SerPl Direct Assay-mCnc
Class Type	Lab
Class	Chem
Example Units (local)	mg/dL
Example Units	mg/dL
Order/Obs	Both

Per term

- ❑ Terms have structure
 - ❑ Term links to parts- 6 main parts and up to 13 parts total
- ❑ Parts have synonyms that link to the term
- ❑ Parts or terms can have translations
- ❑ Numeric terms have UCUM units
 - <http://unitsofmeasure.org/trac>
 - ❑ UCUM is also from Regenstrief (by Gunther Schadow MD)
- ❑ Categorical terms have answer lists – which have LOINC answer codes, universal codes (such as SNOMED CT).
- ❑ Individual terms have links to the panels in which they are members

Term/part have descriptions that provide encyclopedic info

Cells.HPV E6+E7 mRNA/cells [Presence] in Cervix by Flow cytometry (FC)

Most human papilloma virus (HPV) genomes encode for eight major proteins, six "early" (E1, E2, E3, E4, E6, and E7) and two "late" (L1 and L2). The "early" are regulatory in function. E6 and E7 genes in high-risk HPV genotypes are known as oncogenes because of their continuous expression, which leads to disruption of cell-cycle check points and cell genome instability through alteration of cellular p53 and retinoblastoma protein functions. This test identifies cervical cells containing HPV E6 and E7 polycistronic mRNA using in situ hybridization with oligonucleotides specific for the mRNA transcripts. The cells remain intact, and following fixation and permeabilization, the probes enter the cells. The flow cytometer measures two things: 1. Quantification of E6 and E7 mRNA in each cell and 2. The percentage of cells over-expressing E6 and E7 mRNA.

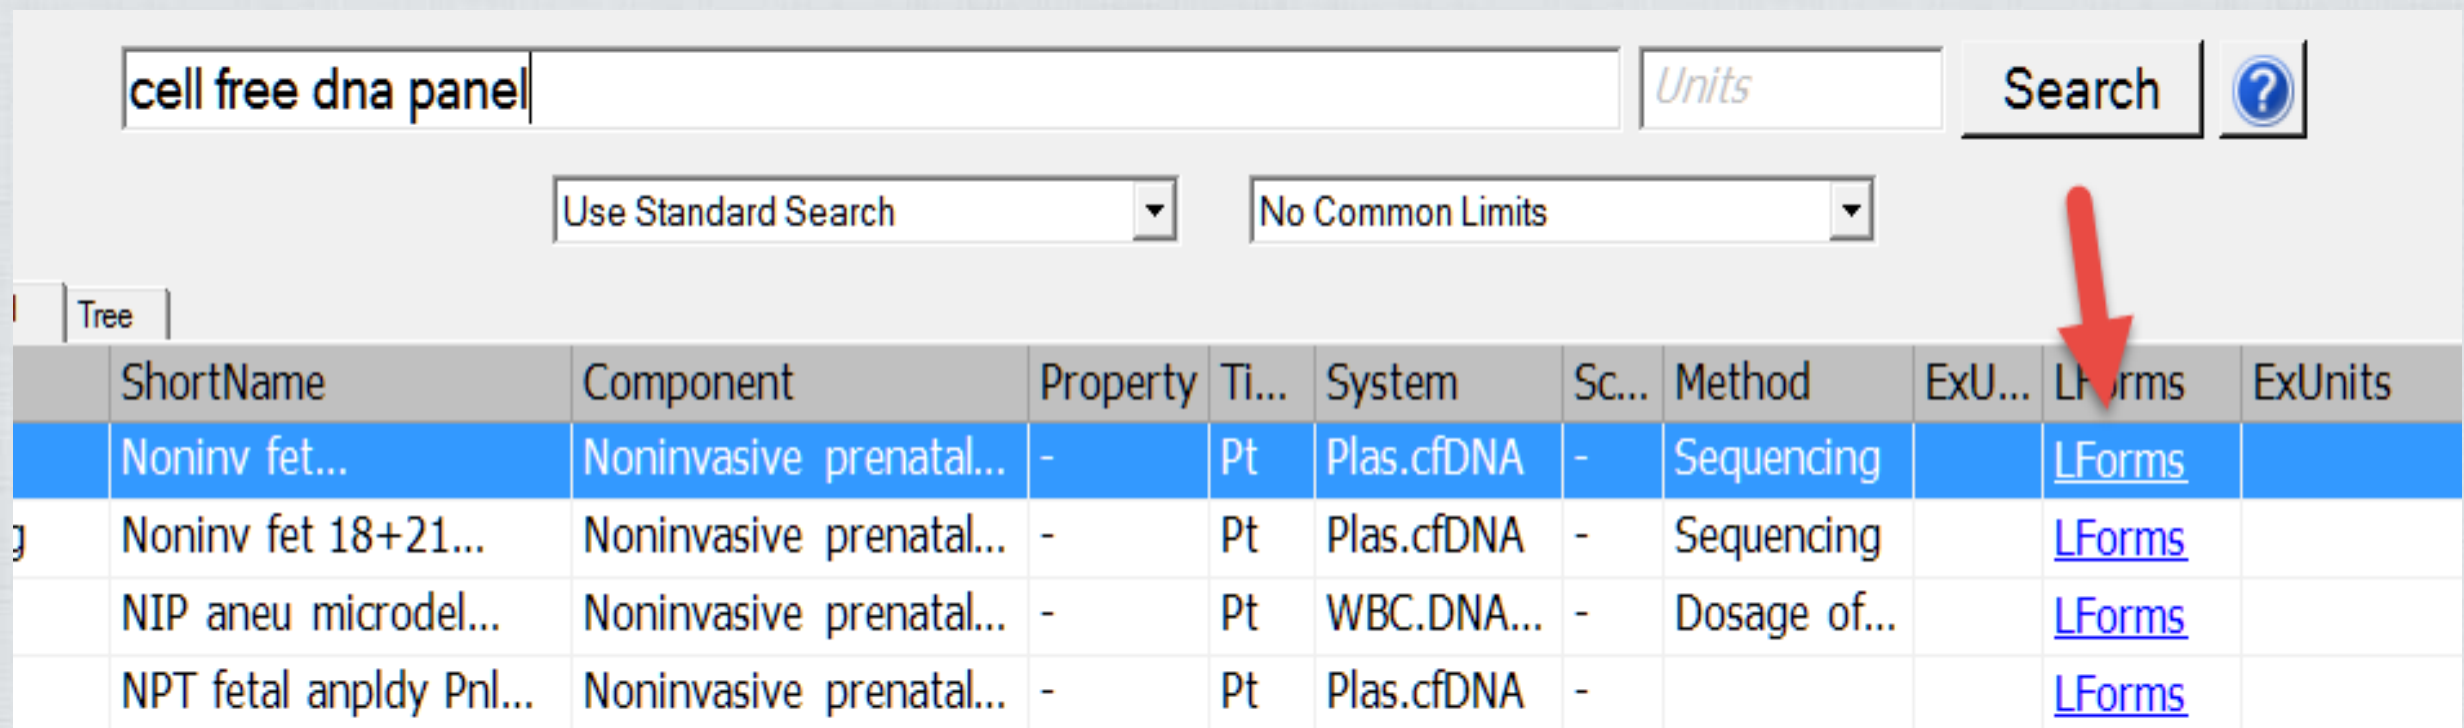

LOINC Panels & Forms

LOINC panels/forms

- ❑ Panels are LOINC terms (with LOINC IDs) that can contain multiple child terms
- ❑ Panels can be nested
- ❑ Panels have many special attributes contained in the relationship table that connects terms with panels
- ❑ Can pull this from LOINC Panels and forms
 - ❑ <https://loinc.org/downloads/accessory-files>

LOINC panels/forms

- ❑ Panels are also executable forms
 - ❑ Via a JSON structure
- ❑ Terms in forms can have defaults, calculations, skip logic, required and other special statuses.
- ❑ To generate an input from from a panel, click on “L-forms”

The screenshot shows the LOINC search interface. At the top, there is a search bar containing 'cell free dna panel', a 'Units' dropdown, a 'Search' button, and a help icon. Below the search bar are two dropdown menus: 'Use Standard Search' and 'No Common Limits'. On the left, there is a 'Tree' button. The main part of the interface is a table with the following columns: ShortName, Component, Property, Ti..., System, Sc..., Method, ExU..., LForms, and ExUnits. The table contains four rows of data, all of which are highlighted in blue. A red arrow points to the 'LForms' column header.

	ShortName	Component	Property	Ti...	System	Sc...	Method	ExU...	LForms	ExUnits

Many more...

For the last few years, the AP-HP has been using the LOINC international nomenclature...

Interopérabilité en biologie : le cadre technique et fonctionnel est posé

Thanks to this catalogue, the AP-HP is able to use the nomenclature in its treatment processes, whenever biology analyses and test results are requested.

En France, plusieurs centaines de milliers de professionnels de la biologie ont introduit la technique de la numérisation des données de santé et de leur échange. L'enjeu est de faire en sorte que les professionnels de la santé puissent échanger les données de santé de manière simple et efficace, leur permettant de constituer des données médicales, de les stocker et de les partager. Avec la mise en place de l'ASIP Santé en 2009, dotée de missions spécifiques pour consolider l'interopérabilité des systèmes d'information dans le secteur de la santé, une impulsion nouvelle aux travaux entrepris par les différents acteurs du secteur a été donnée.

En France, plusieurs années, l'AP-HP et la SFIL ont pris la décision de fusionner leurs traductions afin de produire le document LOINC de référence en français pour l'expression des résultats de biologie [3]. Ce référentiel est désormais partie intégrante du Cadre d'Interopérabilité des Systèmes d'Information de santé (CI-SIS) approuvé par les industriels en octobre 2009 et publié par l'ASIP Santé dans le Répertoire National des Référentiels (RNR). L'intégration à ce référentiel de l'ensemble de la traduction des libellés LOINC est en cours.

Parallèlement, l'AP-HP et la SFIL ont chacune apporté leur contribution directe à l'élaboration par l'ASIP Santé du modèle HL7 CDA de compte rendu électronique de biologie, puis à l'approbation aux côtés des industriels en avril 2010, de ce modèle, disponible depuis lors dans le CI-SIS.

Grâce à ces deux référentiels - LOINC et modèle de compte rendu CDA - les résultats de biologie peuvent désormais être échangés entre professionnels de santé, et partagés dans le DMP - dossier médical personnel, dont le service national a été ouvert le 5 janvier 2011 - dans une forme et une sémantique univoques, dotant le médecin qui reçoit ou consulte ces résultats de la

Implementation and management of a biomedical observation dictionary in a large healthcare information system

ABSTRACT

Objective This study shows the evolution of a biomedical observation dictionary within the Assistance Publique Hôpitaux Paris (AP-HP), the largest European university hospital group. The different steps are detailed as follows: the dictionary creation, the mapping to logical observation identifier names and codes (LOINC), the integration into a multiterminological management platform and, finally, the implementation in the health information system.

Methods AP-HP decided to create a biomedical observation dictionary named AnaBio, to map it to LOINC and to maintain the mapping. A management platform based on methods used for knowledge engineering has been put in place. It aims at integrating AnaBio within the health information system and invalidating the choice made to develop a local dictionary.

Results This new management platform is now active in AP-HP. The AnaBio dictionary is shared by 120 laboratories and currently includes 50 000 codes. The mapping implementation to LOINC reaches 40% of the AnaBio entries and uses 26% of LOINC records. The results of our work validate the choice made to develop a local dictionary aligned with LOINC.

Discussion and Conclusions This work constitutes a first step towards a wider use of the platform. The next step will support the entire biomedical production chain, from the clinician prescription, through laboratory tests tracking in the laboratory information system to the communication of results and the use for decision support and biomedical research. In addition, the increase in the mapping implementation to LOINC ensures the interoperability allowing communication with

chain. This dictionary should ideally remain independent of any system constraints and be common to all laboratories.

The biomedical observation dictionary, named AnaBio, is based on previous works (C-NPU,¹ Euclides,² Names-Lab,³ Cumul⁴ and logical observation identifier names and codes (LOINC)).^{5–7} It consists of all codes and labels for the definition of each observation (the laboratory domain of the international initiative 'integrating the healthcare enterprise', IHE LAB, defines a laboratory test result as an observation that is a measurement of a single variable or a single value derived logically and/or algebraically from other measured or derived values). It standardizes other elements, such as the display label, the edition label, the mnemonic and the units. The dictionary must be based on a terminology shared by as many as possible to secure the communication of the test results to health practitioners, no matter where the practice is located. Considering that LOINC has now the widest international development,⁸ AP-HP decided to map its biomedical observation dictionary to LOINC and ensures the maintenance of this mapping. Other hospitals showing a more or less complete mapping to LOINC have also made this choice.^{9–11} In addition, the French translation of LOINC labels is part of a cooperative work between the French Society of Laboratory Computing (SFIL) and the AP-HP, promoted by the shared healthcare information system agency (ASIP-Santé: Agence des Systèmes d'Information Partagés de Santé).¹²

The results of our work validate the choice made to develop a local dictionary aligned with LOINC.

PhilHealth to Adopt LOINC in its eClaims System

The Philippine Health Insurance Corporation is adopting the Logical Observations, Identifiers, Names and Codes (LOINC) for use in its electronic claims system. LOINC is produced and managed by the Regenstrief Institute, Indianapolis, Indiana and is used for consistently coding common clinical and laboratory events that occur in the healthcare setting.

LOINC was selected because of its popularity and no-cost licensing. *“Health informatics standards are important building blocks for an integrated national health information system. The earlier we prepare our stakeholders on what these standards are and how to use them, the sooner we will achieve automation and efficiency,”* according to Dr. Alvin Marcelo, Chief Information Officer.

“In our efforts to automate our core processes, we have found the need to use internationally accepted standards for common data elements in our claims system. LOINC is an important standard which we can quickly leverage at no cost to PhilHealth and to hospitals but will dramatically improve our ability to exchange data with each other. This is our first step towards energizing the health informatics community in the country and delighting our stakeholders,” says PCEO Dr. Eduardo P. Banzon.

PhilHealth is preparing for the deployment of paperless electronic claims processing system. Releasing these standards are part of the preparations for eClaims with the objective of paying Health Care Providers faster.

LOINC can be downloaded for free at www.loinc.org. Another free software, RELMA, helps users browse the LOINC database.

RECOMMENDED HEALTHCARE IT STANDARDS (FOR INDIA)

Name	Class	Comments
<i>Phase 1</i>		
UHID	Unique Health Identifier – to act as Patient Identifier	UID as a unique (primary or secondary) patient identifier. The UID should be used to identify a particular patient across all organizations (and their EMR systems); Aadhar number is recommended for use in EMR as either the primary or secondary, where the primary is an internal unique health identifier used by the healthcare provider organisation.
CCD (HL7/ASTM)	Clinical Data for Inter Department documents (the CDA CCD)	Likely to be used for exchanging the clinical documentation between two EHR solutions both within an organisation and outside
ATC Pharmacologic-Therapeutic Classification Indian Drugs – MIMS/CIMS from CMPmedica	Medicines	Needs to be researched as there is no universal drug reference database. The WHO Drug Dictionary ATC – anatomic therapeutic classification – may be a good choice to begin with
LOINC	Clinical Laboratory Observations	Published and maintained by the Regenstrief Institute, USA, this is a universally accepted code for laboratory observations

5.2. LOINC

LOINC è un sistema di nomi e codici universali che identificano in maniera univoca osservazioni cliniche e di laboratorio al fine di facilitare la condivisione e lo scambio di risultati di indagini diagnostiche fra sistemi elettronici di strutture sanitarie differenti. Il Regenstrief Institute si occupa dell'aggiornamento dello standard terminologico con release semestrali.

La classificazione LOINC adottata per i documenti del FSE è la versione 2.3.4 in lingua italiana.

Il portale www.fascicolosanitario.gov.it nasce per la presentazione e il monitoraggio dei piani di progetto regionali per la realizzazione del Fascicolo Sanitario Elettronico (FSE). Il comma 15-bis dell'art. 12 del decreto legge 18 ottobre 2012, n. 179, recante "Ulteriori misure urgenti per la crescita del Paese", convertito, con modificazioni, dalla legge 17 dicembre 2012, n. 221, stabilisce, infatti, che le regioni e le province autonome debbano presentare, entro il **30 giugno 2014**, il piano di progetto per la realizzazione del FSE, redatto sulla base delle linee guida rese disponibili dall'**Agenzia per l'Italia Digitale** e dal **Ministero della Salute**, entro il **31 marzo 2014**.

Dal portale è possibile scaricare le [Linee guida per la presentazione dei piani di progetto regionali per la realizzazione del fascicolo sanitario elettronico](#), come risultato del lavoro congiunto svolto dal Tavolo tecnico, coordinato dall'Agenzia per l'Italia Digitale e dal Ministero della salute, nel quale sono stati coinvolti attivamente i rappresentanti delle Regioni, del Ministero dell'economia e delle finanze e il CNR, per analizzare gli aspetti tecnici, normativi e procedurali e disegnare gli scenari di riferimento nella progettazione dell'intervento.

Circular

To: All Licensed Healthcare Providers

Subject : Implementation of Logical Observation Identifiers Names and Codes (LOINC) as the national standardized laboratory coding system

Dear respected Health Care Providers,

The purpose of this circular letter is to clarify matters related to the implementation of LOINC. The use and implementation of LOINC as the national standardized laboratory coding system was mandated by the Qatar National Clinical Coding Committee (QNCCC) as of 24 November 2014. As such, health care providers are obliged to implement LOINC as the national standardized laboratory coding system in the State of Qatar. Technical implementation and operational details will be reviewed subsequently as the SEHA implementation progresses.

Please refer to subsequent circular from NHIC regarding compliance dates.

For any further enquiries, please email us at infoshi@sch.gov.qa.

Sincerely yours,

Dr. Faleh Mohamed Hussain Ali
Assistant Secretary General for Policy Affairs
Chair of Qatar National Clinical Coding Committee

i-STAT® **TECHNICAL BULLETIN**

LOINC® CODING FOR i-STAT® TESTS

OVERVIEW

LOINC® coding is a universal standard coding system for laboratory and clinical observations. It is the key to interoperability and analysis of clinical results/observations for evidence-based outcomes measurement. Standard terms are used for both observations and measurements, allowing an efficient exchange and aggregation of electronic health data across independent and disparate systems, making LOINC the preferred code set for electronic exchange among health care facilities, laboratories and public health agencies.

ASSIGNMENT OF CODES

In response to customer requests for LOINC codes related to i-STAT® test components, Abbott Point of Care reviewed the information in the LOINC coding data base and identified LOINC codes expected to be suitable for each i-STAT analyte. The code(s) that Abbott Point of Care is recommending is based on the LOINC Long Test Name and has been evaluated with the other parameters for each given code as described in the LOINC data base.

Each LOINC code presented here provides the following information:

- Analyte
- System/sample type
- Property measured
- Units of measure

The codes provided in this bulletin are intended as a recommended guideline for customers when assigning LOINC codes to their laboratory test menu and compendia and are not intended to be definitive codes. Customers are responsible for reviewing the information presented here and determining if a different code may be more appropriate for their laboratory needs.

To confirm appropriate laboratory coding, the LOINC coding data base is available free of charge through the Regenstrief LOINC website, www.loinc.org. For more information on LOINC coding, please refer to the *Logical Observation Identifiers Names and Codes (LOINC®) Users' Guide* at <http://loinc.org/downloads/files/LOINCManual.pdf>.

LOINC®, Logical Observation Identifiers Names and Codes, is a registered United States trademark of Regenstrief Institute, Inc. i-STAT® is a registered trademark of the Abbott Group of Companies in various jurisdictions.

HL7 VERSION 2.5.1 IMPLEMENTATION GUIDE: S&I FRAMEWORK LAB RESULTS INTERFACE, RELEASE 1 – US REALM

[HL7 Version 2.5.1: ORU^R01]

DRAFT STANDARD FOR TRIAL USE

July 2012

Publication of this draft standard for trial use and comment has been approved by Health Level Seven International (HL7). This draft standard is not an accredited American National Standard. The comment period for use of this draft standard shall end 24 months from the date of publication. Suggestions for revision should be submitted at <http://www.hl7.org/dstucomments/index.cfm>.

Following this 24 month evaluation period, this draft standard, revised as necessary, will be submitted to a normative ballot in preparation for approval by ANSI as an American National Standard. Implementations of this draft standard shall be viable throughout the normative ballot process and for up to six months after publication of the relevant normative standard.

TABLE 3-13. OBSERVATION RESULT SEGMENT (OBX)

SEQ	Element Name	DT	Usage	Cardinality	Value Set	Description/Comments
1	Set ID – OBX	SI	R	[1..1]		For the first repeat of the OBX segment, the sequence number shall be one (1), for the second repeat, the sequence number shall be two (2), etc.
2	Value Type	ID	C(R/X)	[0..1]	HL70125 (constrained)	Condition Predicate: If OBX-5 (Observation Value) is valued This field identifies the data type used for OBX-5.
3	Observation Identifier	CWE_CR	R	[1..1]	Logical Observation Identification Name and Codes (LOINC)	LOINC shall be used as the standard coding system for this field if an appropriate LOINC code exists. Appropriate status is defined in the LOINC Manual Section 11.2 Classification of LOINC Term Status. If a local coding system is in use, a local code should also be sent to help with identification of coding issues. When no valid LOINC exists the local code may be the only code sent. When populating this field with values, this guide does not give preference to the triplet in which the standard (LOINC) code should appear.
4	Observation Sub-ID	ST	C(R/RE)	[0..1]		Condition Predicate: If there are multiple OBX segments associated with the same OBR segment that have the same OBX-3 values for (OBX-3.1 and OBX-3.3) or (OBX-3.4 and OBX-3.6).
5	Observation Value	Varies	RE	[0..1]		Note: If value is coded, ST should not be used See Section 4.2 SNOMED CT for guidance on how to value this field for Microbiology.

DSTU BALLOT

September 2014

**Sponsored by:
Orders and Observations Work Group
in collaboration with the Health and Human Services Standards
and Interoperability Framework Laboratory Orders Interface Working Group**

5.5.11 OBR – OBSERVATION REQUEST SEGMENT

TABLE 5-18. OBSERVATION REQUEST SEGMENT (OBR)

SEQ	Element Name	DT	Usage	Cardinality	Value Set	Description/Comments
1	Set ID - OBR	SI	R	[1..1]		For the first occurrence of the OBR segment, the Sequence number shall be one (1), for the second occurrence, the Sequence number shall be two (2), etc.
2	Placer Order Number	Varies	R	[1..1]		GU Data Type: EI_GU NG Data Type: EI_NG
3	Filler Order Number	Varies	RE	[0..1]		GU Data Type: EI_GU NG Data Type: EI_NG
4	Universal Service Identifier	CWE_CR	R	[1..1]	LOINC	LOINC shall be used as the standard vocabulary to identify the ordered test in OBR-4 (Universal Service Identifier) when an applicable LOINC code is available and provided by the laboratory. When no valid orderable LOINC code exists, the local code may be the only code sent.
5	Priority – OBR		X			Excluded for this Implementation Guide, see Section 2.3.1.
6	Requested Date/Time		X			Excluded for this Implementation Guide, see Section 2.3.1.
7	Observation Date/Time	TS_5	RE	[0..1]		This reflects the specimen collection date/time when the test involves a specimen. Since a test may also involve drawing specimens at different times, e.g., tolerance tests, this date/time only covers the draw of the first specimen. All other specimen collection date/times, including the first one, are communicated in the SPM segment.

HL7 Version 2.5.1 Implementation Guide: S&I Framework Laboratory Test Compendium Framework R2, DSTU Release 2 - US Realm

Also referred to as eDOS (Electronic Directory Of Service)

HL7 Draft Standard for Trial Use Ballot

January 2015

Sponsored by:

Orders and Observations Work Group

**in collaboration with the Health and Human Services Standards and Interoperability Framework Laboratory Orders
Interface Working Group**

eDOS Work Group Co-chair:	Freida Hall, Quest Diagnostics
eDOS Work Group Co-chair:	Mark Jones, Orchard Software
LOI Work Group Co-Chair	Hans Buitendijk, Siemens Healthcare
LOI Work Group Co-Chair	Ken McCaslin, Quest Diagnostics
LOI Vocabulary Work Group Co-chair:	Cindy Johns, LabCorp
LOI Vocabulary Work Group Co-chair:	Riki Merrick, iConnect Consulting
LOI Vocabulary Work Group Co-chair	Virginia Sturfels, Quest Diagnostics

Questions or comments should be directed to the Orders and Observations Workgroup (ord@lists.hl7.org).

6.1 LOINC

The laboratory's local test code and coding system shall be used to identify the orderable test in its electronic Directory of Services. LOINC shall be used as the standard alternate vocabulary to identify an orderable test. The performing laboratory makes the determination of an applicable LOINC order code. When no applicable LOINC code exists, the local code may be the only code defined in the eDOS.

LOINC Codes may be used for both orders and observations and are applicable in the following fields:

- OM1-2 - Producer's Service/Test/Observation ID
- OM1-7 - Other Service/Test/Observation IDs for the Observation
- OM1-31 - Observations Required to Interpret the Observation (Ask at Order Entry)
- OM5-2 - Tests/Observations Included Within an Ordered Test

For further information on LOINC and access to tools, please visit <http://loinc.org>.

Also DICOM and IEEE

- ❑ DICOM uses LOINC codes for radiology and cardiac echo studies
- ❑ IEEE collaborated with LOINC on instrument measure codes
- ❑ UCUM is strongly required for all quantitative measures everywhere in HL7, DICOM and IEEE

Federal policy committee says use LOINC for observations

Health IT Policy Committee

A Public Advisory Body on Health Information Technology to the National Coordinator for Health IT

September 9, 2011

Farzad Mostashari, MD, ScM
National Coordinator for Health Information Technology
Department of Health and Human Services
200 Independence Avenue, SW
Washington, DC 20201

Dear Dr. Mostashari:

The HIT Standards Committee's (HITSC) Clinical Quality Measures Workgroup (CQMWG) and Vocabulary Task Force (VTF) jointly developed recommendations on the assignment of code sets to clinical concepts [data elements] for use in quality measures.

The CQMWG and VTF held a series of joint meetings to develop the set of recommendations. This letter transmits the recommendations to the Department of Health and Human Services (HHS) on the assignment of code sets to clinical concepts for use in quality measures. On August 17, 2011, the CQMWG and VTF reported on and discussed their findings with the HITSC, which were subsequently approved as outlined below.

Food and Drug Administration

[Docket No. FDA-2004-N-0451]

**Food and Drug Administration
Modernization Act of 1997:
Modifications to the List of Recognized
Standards, Recognition List Number:
038**

AGENCY: Food and Drug Administration,
HHS.

ACTION: Notice.

SUMMARY: The Food and Drug
Administration (FDA) is announcing a
publication containing modifications
the Agency is making to the list of
standards FDA recognizes for use in
premarket reviews (FDA Recognized

who elect to declare conformity with
consensus standards to meet certain
requirements for medical devices.

DATES: Submit either electronic or
written comments concerning this
document at any time. See section VII
of this document for the effective date
of the recognition of standards
announced in this document.

ADDRESSES: An electronic copy of
Recognition List Number: 038 is
available on the Internet at [http://
www.fda.gov/MedicalDevices/
DeviceRegulationandGuidance/
Standards/ucm123792.htm](http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/Standards/ucm123792.htm). See section
VI of this document for electronic access
to the searchable database for the
current list of FDA recognized
consensus standards, including
Recognition List Number: 038
modifications and other standards
related information.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2015-N-1349]

Electronic Study Data Submission; Data Standards; Support for the Logical Observation
Identifiers Names and Codes

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; request for comments.

SUMMARY: The Food and Drug Administration (FDA) is encouraging sponsors and applicants to provide Logical Observation Identifiers Names and Codes (LOINC) codes (available at <http://loinc.org/>) for clinical laboratory test results in investigational study data provided in regulatory submissions submitted to the Center for Drug Evaluation and Research and to the Center for Biologics Evaluation and Research. LOINC code is defined as electronic messages for laboratory test results and clinical observations. The decision to adopt LOINC for lab test results is part of a larger FDA effort to align the use of data standards for clinical research with ongoing nationwide health information technology initiatives. FDA invites public comment on appropriate steps the Agency could take to promote the use and utility of LOINC-coded clinical data submitted to the Agency. The LOINC common terminology will be listed in the FDA Data Standards Catalog that is posted to FDA's Study Data Standards Resources Web page at

A close-up photograph of a young child with dark hair, wearing a white t-shirt with a pattern of small tool icons (wrench, screwdriver, hammer, etc.). The child is holding a green garden hose nozzle with a black trigger handle and is spraying water directly onto their face. The water is captured in mid-air, creating a misty spray. The background is a blurred green lawn and a brick wall. The text "Many unexpected successes along the way" is overlaid in a light blue, serif font across the center of the image.

NAME

Fully-Specified Name:	Component	Property	Time Aspect	System	Scale	Method
	Streptococcus pyogenes rRNA	ACnc	Pt	XXX	Ord	Probe

DEFINITION/DESCRIPTION

Source: Wikipedia

Streptococcus pyogenes is a Gram-positive bacterium that grows in long chains depending on the culture method. *S. pyogenes* displays group A antigen on its cell wall and beta-hemolysis when cultured on blood agar plate. *S. pyogenes* typically produces large zones of beta-hemolysis, the complete disruption of erythrocytes and the release of hemoglobin, and it is therefore called Group A (beta-hemolytic) Streptococcus (abbreviated GAS). *S. pyogenes* has several virulence factors. A carbohydrate capsule surrounds the bacterium, protecting it from attack by macrophages. Further, there are proteins, lipoteichoic acids, embedded within the capsule (M protein) that also increase virulence by facilitating attachment to host cells. M protein inhibits complement activation, an important component of the immune system.

Last Updated: 2011/11/21 07:04:10 AM

Source: National Library of Medicine, MeSH 2006

A species of gram-positive, coccoid bacteria isolated from skin lesions, blood, inflammatory exudates, and the upper respiratory tract of humans. It is a group A hemolytic Streptococcus that can cause scarlet fever and rheumatic fever.

Common LOINC Result and Universal Order Codes

Get LOINCing fast.

We know you want to hit the ground running, so we've created a few lists that help focus on some low hanging fruit. With help from the LOINC community, we've compiled three data-driven lists to jump start your standardization effort: a list of the most **common result codes** and mapping advice to go with it, a collection of frequently used **universal order codes**, and a starter set of **UCUM codes** (for those of you brave enough to standardize your units of measure).

You can get them all right here.

Top 2000 Results

An empiric list of the most frequently used LOINC result codes.
Expert mapping advice included.

[Top 2000 Results plus Mapper's Guide](#)

Universal Order Codes from LOINC

A super short list of LOINC codes covering >95% of U.S. lab orders.
Empirically derived and vetted by consensus.

[Universal Order Codes from LOINC](#)

Common UCUM Codes

Lost with UCUM?
This list makes it easy for your typical reporting units of measure.

[Example UCUM Codes for Electronic Messaging](#)

LOINC MAPPER'S GUIDE TO TOP 2000+ LAB TESTS v1.0a

SORT BY: Class Override >System
Adjusted > Long Common Name

	B	C	E	F	G	H	I	P
	LOINC #	Long Common Name	Class Override	Rank	Example UCUM	Example UCUM Display	Comment	System Adjusted
1								
126		Antibacterial susceptibility						
		<p>The statistics for antibiotic susceptibility tests in the Top 2000 List are not as broadly based as most of the other test categories, because antibiotic susceptibilities were available from only one of our 3 sources.</p> <p>LOINC provides codes for antibiotic susceptibility testing based on method used. The four major categories are as follows:</p> <ol style="list-style-type: none"> 1) A general flavor that does not specify the method of testing used 2) Minimum Inhibitory Concentrations (MIC) 3) Kirby Bauer disc testing (KB) and 4) Gradient strip (E-test) <p>The general flavor can be used to report results for any of the three more specific approaches (Kirby Bauer, MIC or E-test susceptibilities) assuming that the details regarding the method of testing is provided elsewhere in the messages or in other OBX segments.</p> <p>The majority of the antibiotic susceptibility tests that made it into the top 2000 list are of this general flavor type, but a few MIC tests and gradient strip LOINC codes also appear. In case your laboratory prefers the more specific codes for the antibiotics listed here, you can find them under the Antibiotic susceptibility class in the full LOINC database.</p> <p>Some of the antibiotics used to treat tuberculosis are also used to treat more common bacterial infections. LOINC provides specific codes for reporting antibiotic susceptibilities to slow growing Mycobacteria – such as M.tuberculosis, M.avium and M.intracellular, and these codes should be used for reporting antibiotic susceptibilities for such bacteria. These codes can be identified by the phrase "slow growing mycobacteria" in the method part of the LOINC name. Antibiotic susceptibilities to a fast growing mycobacteria can be reported under the same codes as any other bacteria.</p>						
127								
128	13317-3	Methicillin resistant Staphylococcus aureus [Presence] in Unspecified specimen by Organism specific culture	Antibacterial susceptibility	146			Methicillin Resistant Staphlocuss via culture--	Any
129	18860-7	Amikacin [Susceptibility]	Antibacterial susceptibility	414				Isolate

Indian Health Service Office of Information Technology

The Indian Health Service (IHS), an agency within the Department of Health and Human Services, is responsible for providing federal health services to American Indians and Alaska Natives. The IHS provides a comprehensive health service delivery system for approximately 1.9 million American Indians and Alaska Natives who belong to 562 federally recognized tribes in 35 states. The IHS Office of Information Technology will begin a comprehensive LOINC project to assign correct LOINC codes to laboratory tests and test results in their hospital information systems to comply with CMS 'meaningful use' mandates and agency interoperability mandates.

ISIS Health Informatics Resource Group Inc.

ISIS Health Informatics offers a variety of services using both the international LOINC standard as well as the adaptation of the Canadian Approved Standard for LOINC, pCLOCD. Resources include LOINC Subject Matter experts with considerable mapping and maintenance experience and a depth of clinical and lab experience which covers all lab domains as well as established working relationships with Regenstrief and Infoway. Services include LOINC to local LIS test catalogue mapping, LOINC to LIS code map maintenance and update analysis as well as auditing for existing LOINC to LIS code maps. ISIS has developed workflow and change control processes to support large or small mapping projects. ISIS is a Canadian based health information management company providing strategic, implementation, auditing, benefits evaluation, governance consulting, and clinical subject matter experts support electronic health records development in Canada since 2004 and the US since 2005.
